

# What is a Facilities Master Plan?

Help us make our buildings better. Kansas City Public Schools (KCPS) is developing a long-range facilities plan that will guide capital improvement decisions for the next five years (SY2014/15 – SY2018/19) to ensure that facility investments promote academic achievement.

## Who is developing the plan?

You! Students, parents, teachers, staff, community members. The entire KCPS community. There are multiple ways to get involved and share your feedback. Public meetings, student focus groups, KCPS Forum, an easy online tool to share your feedback. In addition, this fall each school will have an area dedicated to the Facilities Master Plan where you can share your feedback about the needs of your school.

KCPS has also formed an Advisory Committee that includes parents, educators, business and civic leaders and representatives of the design and construction fields. The Advisory Committee will represent local stakeholders and provide guidance during the planning process on key issues to KCPS staff, Superintendent Green and the school board.

## Key issues to be considered:

- What will student enrollment be in the future?
- How many students can our existing school facilities accommodate?
- What is the condition of our school buildings?
- What building improvements are needed to improve student achievement?
- How can we pay for school improvements?
- How should we prioritize the needs of our school buildings?
- What school boundaries will best serve the needs of our students and their families today and in the future?

The primary purpose of the Facilities Master Plan is to evaluate the adequacy of existing educational facilities and assess which facilities and facility improvements are needed to improve the learning environment of all KCPS students. It will also identify a financing strategy for completing the necessary facility improvements and assess opportunities for expanding/enhancing meaningful opportunities for joint use/ community use of KCPS facilities.
